

MAMMA BEAR

Mk Ia

Your Interactive
Medical Alert Liaison

patent pending

Once upon a time...

Your mom took you to the doctor. She was the one to do it because she knew everything about you. She could answer all their questions. And she could put a stop to anything that she knew wouldn't work...

Now picture yourself in an emergency. Car accident. Heart attack. You're in an ER, unconscious and alone, and you *don't speak the language*. You need your mom and a translator—someone on your side to speak to the doctor for you. Before missing information becomes a problem... or a catastrophic error.

Mamma Bear Mk Ia is the AI-enhanced medical ID/warning app that can do that. She's automatically collected and read all your medical records. She listens to new information in real time and checks it against what's happened with you in the past. Even if you can't speak, or *just forgot something*, she's smart enough to speak up for you to prevent mistakes. The **Mamma Bear Mk Ia** has all the great features of the Mamma Bear Mk I, with multilingual capability built in.

Mamma Bear is not another medical history app or EHR portal. Those are just libraries—you have to go there and search through the stacks for what you need. Mamma Bear is a **concierge**. She *knows* what you need and *gets it for you*. And if there's a problem, you have live 24/7 tech support on tap.

The Mamma Bear Mk Ia has one job: ***to give you a voice when you've lost yours, no matter where you are.***
